Growing Up With
Wellness In Sight

Children's Vision Benefit

Healthy eyes and early detection of vision issues are critical to the overall wellness and learning development of children. Children often don't know that they have vision problems, and how well they see greatly impacts their education, participation in activities, and much more. The earlier a vision problem is detected and treated, the more likely treatment will be successful.

DeltaVision's Children's Vision Benefit is designed to get children off to a good start for both vision care and their overall wellness, including:

- **An additional eye exam** if vision changes
- **Replacement lenses** if prescription changes within the same benefit year
- **Covered polycarbonate and photochromatic lens options**
- **Contact lens fit and follow-up services**
- **40% off additional complete pairs** of prescription eyeglasses

“

More than one in **20 preschool-age** children and **one in four school-age** children have a vision disorder.”

— National Center for Children's
Vision & Eye Health
